Organisational Overview:

- Courage To Rise Charity
- History:

Courage to rise charity was started by a 19-year-old girl with the passion of helping others from Tembisa. At first, it started as an activity from a beauty pageant competition (Miss Teen Gauteng) but as she completed it, she discovered that it's not just about that only, it's also about the deep connection with empowerment and giving back. Lucia is a young girl who couldn't participate in some activities (school competitions and sports), just because she was afraid of the unknown, failure, and judgment. And realizing that most children from townships and rural areas live with that fear and let it make decisions on their behalf, Lucia is becoming a voice that needs to be heard and standing against fear. She accomplishes through educational programs about fear and making donations with the help of the community and MMR bakery.

- Mission and Vision Statements:

The aim is to build a society where every young person can thrive, free from limitations and fears, and be empowered to achieve their goals. This charity empowers the orphanages to have self-empowerment and be proud of their beauty because staying at the shelter doesn't limit your ambitions.

- Target audience:

People who do not believe in themselves, who would like to donate and those with no confidence.

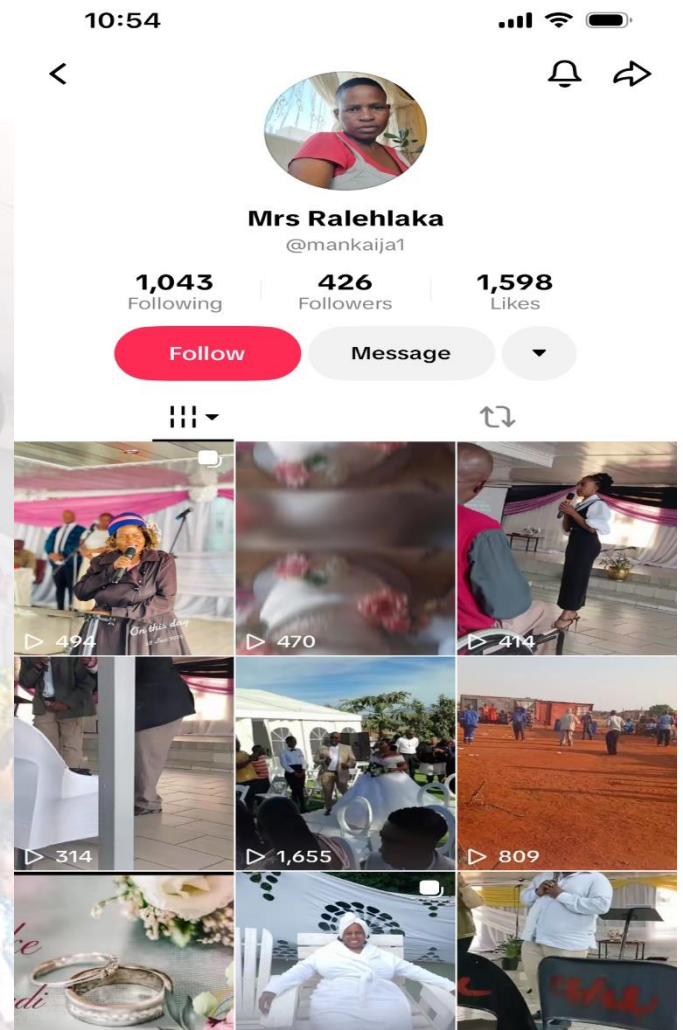

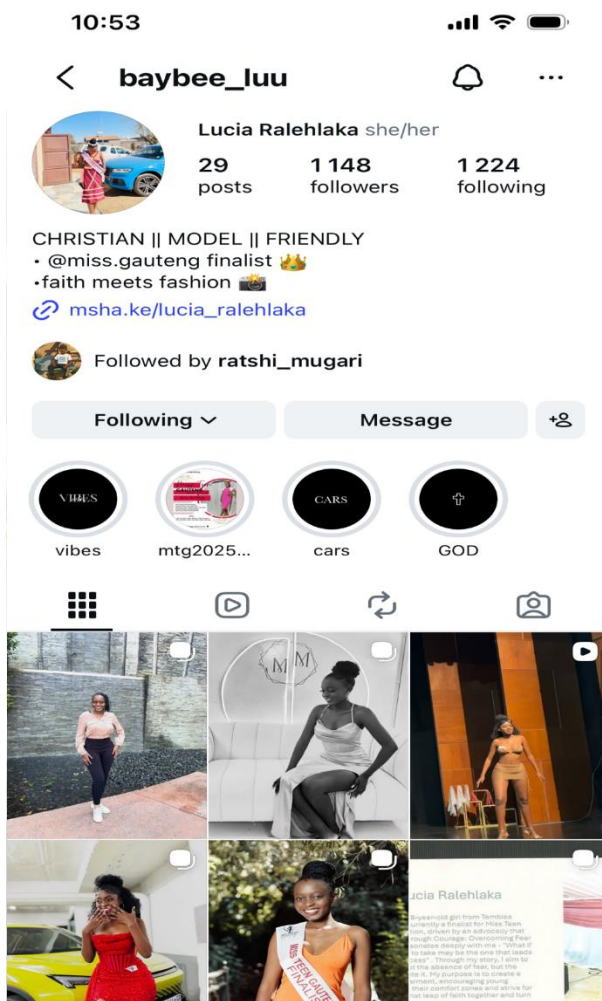

Website Goals and Objectives:

- Providing valuable Information:

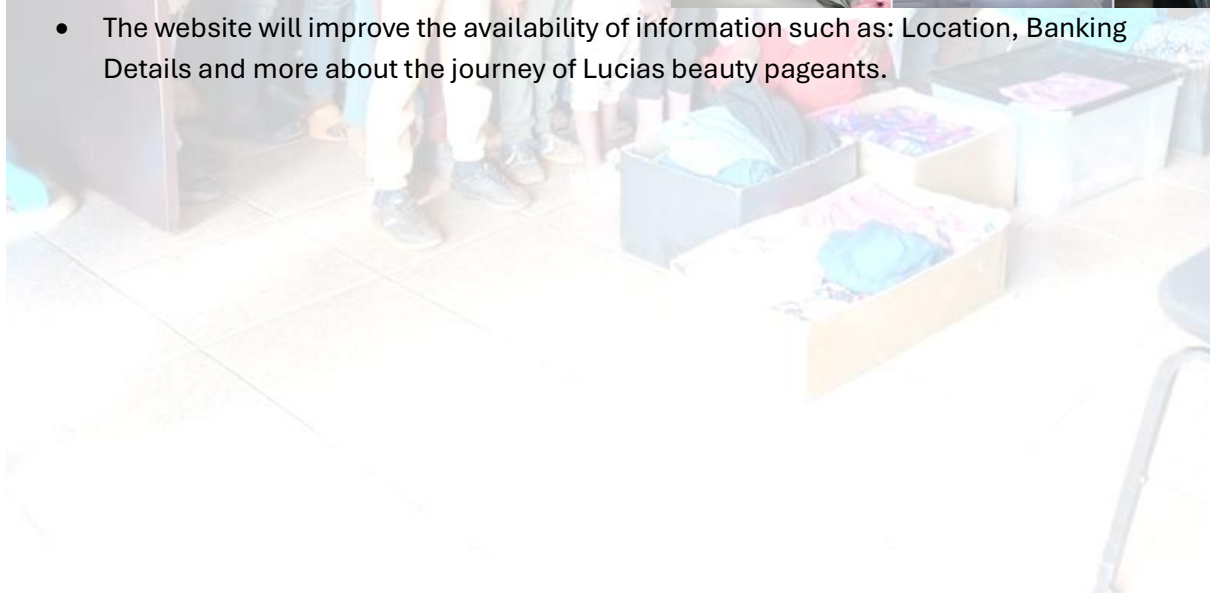

The goal of this website is to mainly provide information about the charity and Lucia's journey for those who visit the website with the intention of being empowered to achieve whatever they want to achieve. This website provides easy navigation for everyone who wants to support Lucias Journey and those who want to donate, to be able to find the location and which banking details to send the money to. The KPIs that would be a success is when 80% of the people who visit our website donate something.

Current Website Analysis:

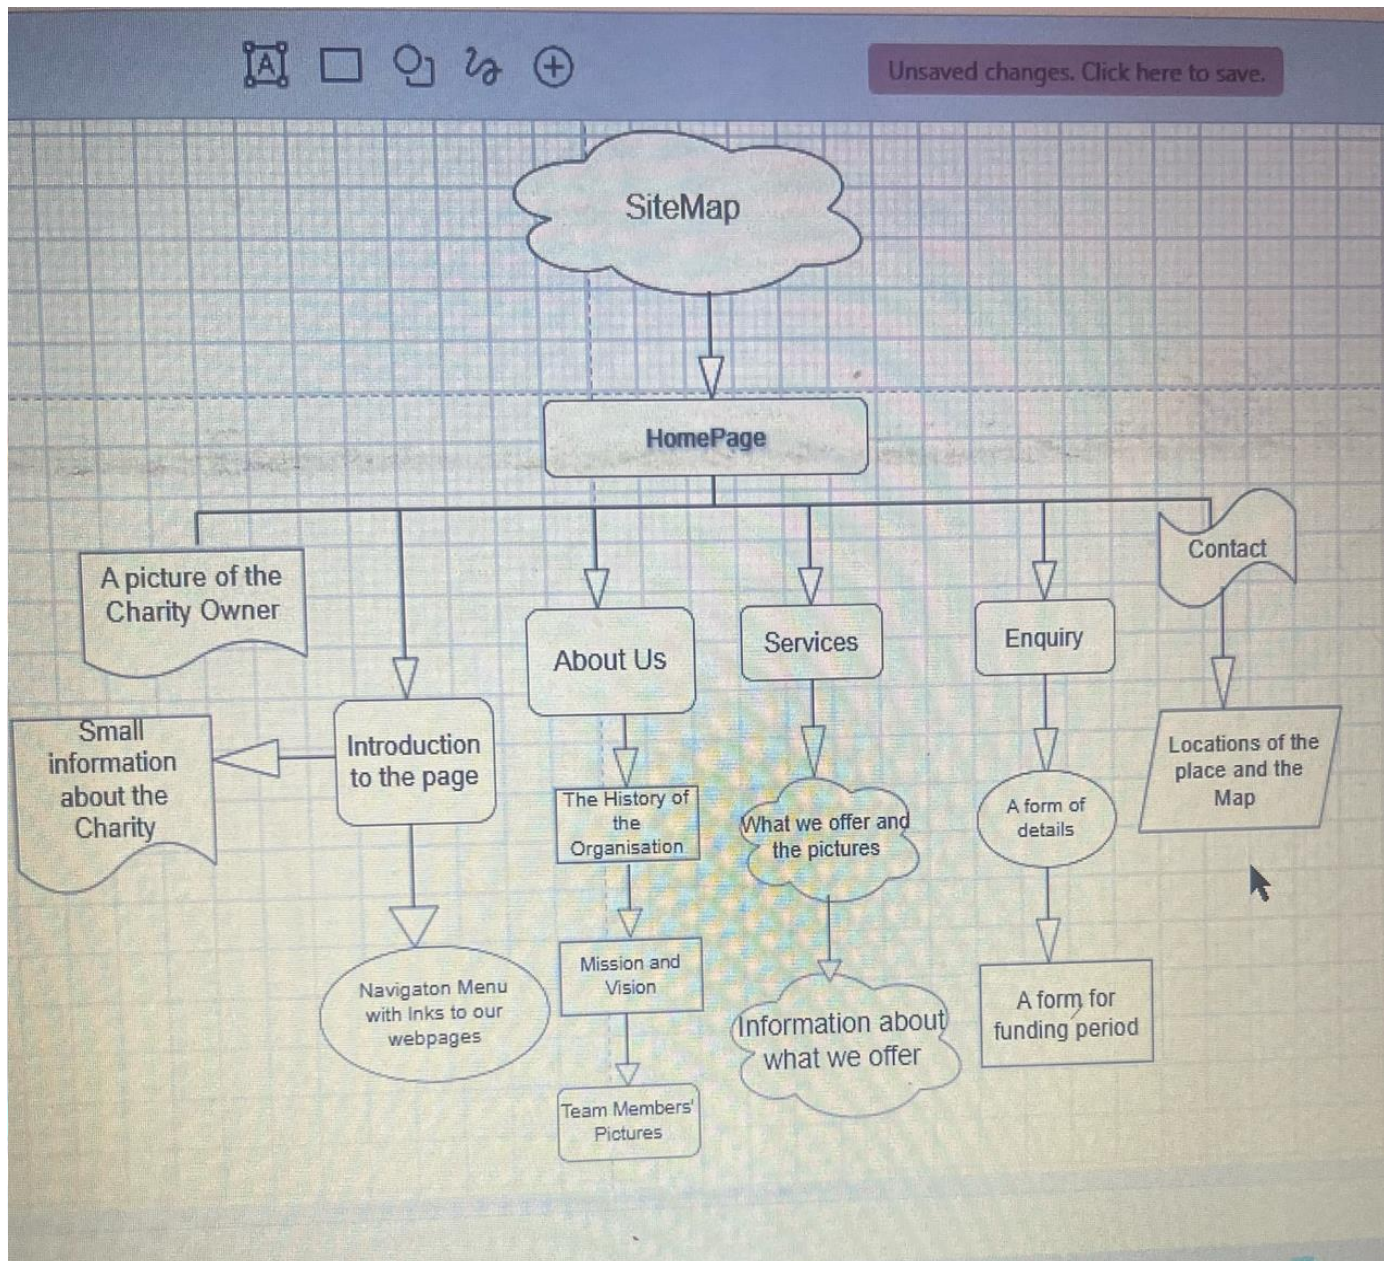

- The charity does not yet have a website it only has Social Media Platforms which are not directly for things involving this charity but are Lucia's personal account moments for adventures and daily life moments and the TikTok account is her mother's business and Christian moments.

- The website will improve the availability of information such as: Location, Banking Details and more about the journey of Lucias beauty pageants.

Proposed Website Features and Functional ty:

Design and User Experience:

- A positive User Experience is key to establishing a successful brand through a website.

Color Scheme:

- Primary colour for Navigation bars, main headings, and footer background is blue as it builds trust. Secondary colour for donation buttons, and payment buttons is

Orange as it screams urgency and action. White colour can be used for background. Black can be used for text colour and button colour.

Topography:

- For titles I will use Italic that is Large, Bold, 36pt for design. For headings I will use Inter that is Medium, Bold, 28pt as it is clean and clear. For body text I will use Roboto that is Semi-bold, 20 pt as it is highly readable.

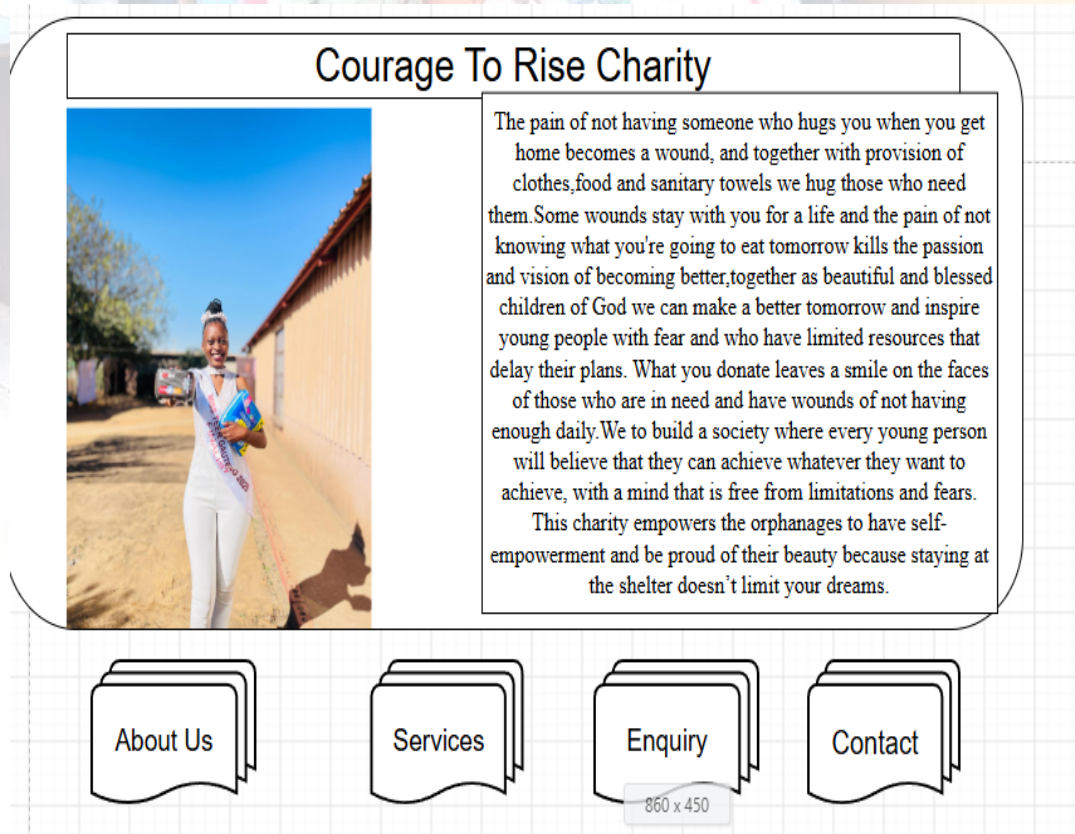

Hierarchy:

- At the top of the webpage, I will write a touchy code. And then following it will be a big warm picture that attracts donations. Below the picture there will be a storyline followed by links to tabs

User Experience Considerations:

Navigation > the website will be easy to use and clear

- Layout > the options will be on the left-hand side and will appear after the three lines are pressed
- Colour and Scalability > The texts will not damage eyes, and the colours will not be dramatic
- Performance and Trust > Fast loading, clear privacy message and protected
- Emotional Flow > The journey builds confidence and touches donators.

History

Courage to rise charity was started by a 19-year-old girl with the passion of helping others from Tembisa. At first, it started as an activity from a beauty pageant competition (Miss Teen Gauteng) but as she completed it, she discovered that it's not just about that only, it's also about the deep connection with empowerment and giving back. Lucia is a young girl who couldn't participate in some activities (school competitions and sports), just because she was afraid of the unknown, failure, and judgment. And realizing that most children from townships and rural areas live with that fear and let it make decisions on their behalf, Lucia is becoming a voice that needs to be heard and standing against fear. She accomplishes through educational programs about fear and making donations with the help of the community and MMR bakery.

We would appreciate your support

Mission:

The aim is to build a society where every young person can thrive, free from limitations and fears, and be empowered to achieve their goals.

Vision:

This charity empowers the orphanages to have self-empowerment and be proud of their beauty because staying at the shelter doesn't limit your ambitions. The most beautiful moments in our lives are those we cherish the most, Keep people who add value to your life and fill your cup with happiness.

We would appreciate doations

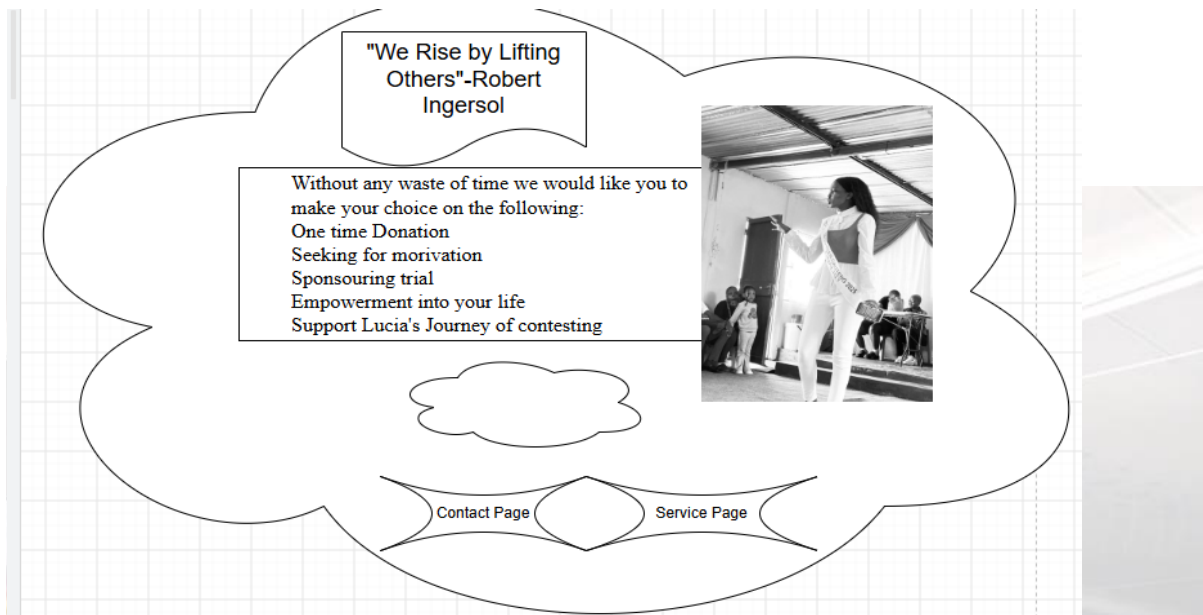

We would appreciate your support on Lucia's Journey

We provide information about the charity and Lucia's journey for those who visit the website and We gather money to help those inneed. Our services are simple those with the intention of being empowered to achieve whatever they want to achieve find information easily. We also provide easy navigation for everyone who wants to support Lucias Journey and those who want to donate, to be able to find the location and which banking details to send the money to. The KPIs that would be a success is when 80% of the people who visit our website donate something. We would really appreciate your support as every kindness makes one smile and the best way to a bigger future is by lifting others.

May your pockets never be dry

We are findable on the following platforms:

Instagram: [baybee_luu](#)
Tiktok: [mankaija1](#)

For those who would like to make donations we are on the following locations:

University of Limpopo
[University of Limpopo](#)

Winnie Mandela zone 8 8902

Technical Requirements:

- The name of your website must have a genuine name and there must be money for constant renewal of ownership.
- There are multiple programming languages that can be used for creating a website but I'm going to use HTML, CCS and Java Script

1. Domain Name Requirements

A domain name is your website's digital address. To acquire and configure one, you must fulfill these standard criteria:

- **Uniqueness:** The name must not be registered by anyone else. You can check availability via a domain registrar like GoDaddy or Namecheap.
- **Registration Cost:** Domains require annual renewal fees to maintain ownership.
- **DNS Configuration:** You must point your domain's Domain Name System (DNS) settings (specifically A records or Nameservers) to your web hosting provider's IP address.
- **SSL Certificate:** To establish a secure `https://` connection, an SSL certificate must be mapped to your domain name.

2. Hosting Requirements by Tech Stack

Web hosting provides the server space, computational power, and databases needed to serve your website files. Hosting options are categorized by how much control and environment customization they offer:

Shared Hosting

- **Best for:** PHP, static HTML/CSS/JavaScript websites.
- **Requirements:** Pre-configured environments with standard control panels (like cPanel).
- **Limitations:** Very limited support for customized backend runtimes like Node.js or Python.

Virtual Private Server (VPS) & Cloud Hosting

- **Best for:** Python (Django/Flask), JavaScript (Node.js), Ruby (Rails), Java, Go.
- **Requirements:** Complete **root access (SSH)** to install custom runtime dependencies, manage specific environment variables, and configure web proxies.

- **Requirements:** Pre-configured environments with standard control panels (like cPanel).
- **Limitations:** Very limited support for customized backend runtimes like Node.js or Python. [Member Lounge](#)

Virtual Private Server (VPS) & Cloud Hosting

- **Best for:** Python (Django/Flask), JavaScript (Node.js), Ruby (Rails), Java, Go.
- **Requirements:** Complete **root access (SSH)** to install custom runtime dependencies, manage specific environment variables, and configure web proxies. [I-Tech System +4](#)

Platform-as-a-Service (PaaS) & Serverless

- **Best for:** Modern decoupled applications, APIs, and microservices.
- **Requirements:** Git-based deployment pipelines. The cloud provider automatically provisions the underlying architecture based on your framework settings. [Register Domain SA](#)

3. Programming Languages & Frameworks Matched to Hosting

The programming language determines the underlying server operating system and structural environment you need to deploy. [Tooltester](#)

Language	Popular Frameworks	Server/Hosting Requirements	Best Hosting Platforms
PHP	Laravel, Symfony, WordPress (CMS)	Linux/Apache/Nginx, MySQL database. Runs efficiently on cheap shared plans.	Hostinger, Bluehost
JavaScript / TypeScript	Node.js (Runtime), Express, NestJS, Next.js	Node.js runtime environment, reverse proxy (Nginx), persistent process managers (PM2).	Vercel, Heroku, DigitalOcean
Python	Django, Flask, FastAPI	WSGI/ASGI application servers (Gunicorn/Uvicorn), PostgreSQL/MySQL.	AWS, DigitalOcean, PythonAnywhere

Timeline and Milestone:

	A	B	C	D
1	29-30 J	Research and planing	Gather all information from various sources and read the module manual as it has information about some parts	
2	1-3 August	Proposal submission	Submit both proposals and see which one gets approved	
3	3-5 August	Website creation	Watch YouTube videos about creating websites and different techniques	
4	5-9 August	Testing and proofreading	Check my website if its properly designed and add some features	
5	14-Aug	Submission Of Part1		

Budget:

- The budget of this website will be R2000-R2500.

Website Cost Ranges (South Africa)

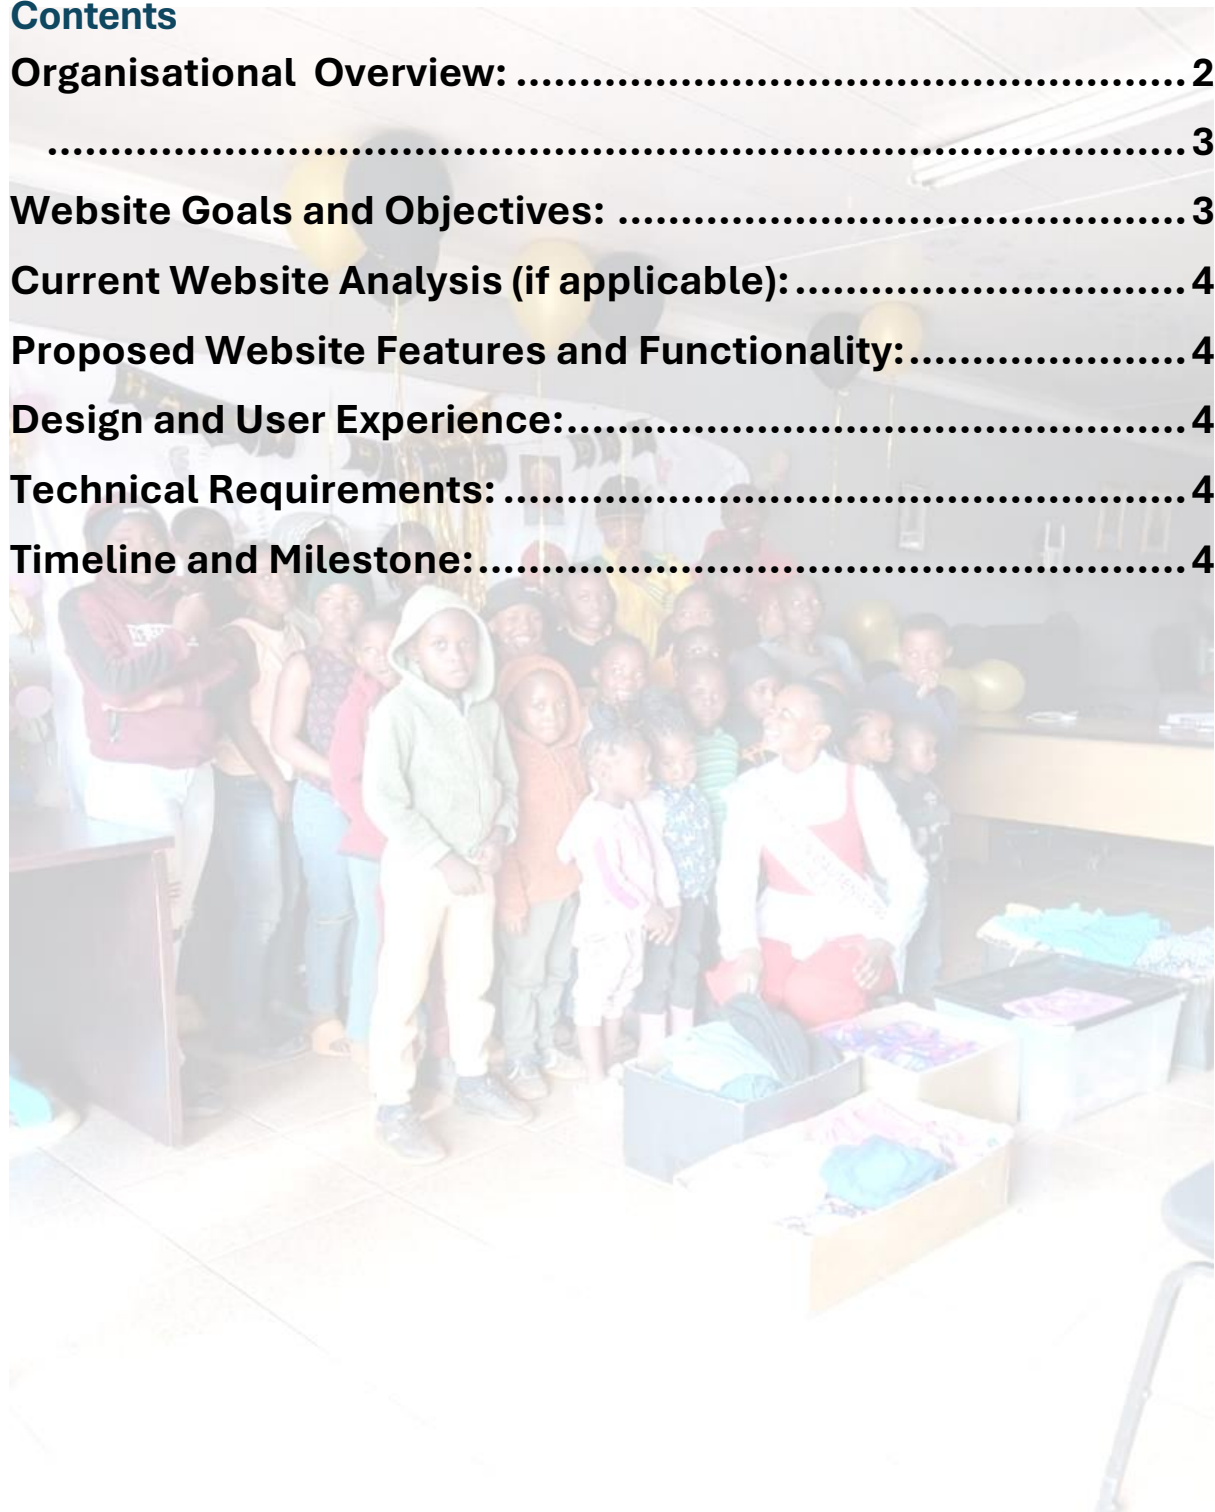

Item	Low-Cost (DIY)	Freelance	Agency/Custom
Domain (.co.za)	R90 - R250/year	Same	Same
Hosting (shared/VPS/cloud)	R30 - R500/month	R100 - R1,500/month	R500 - R3,000+/month
Website build / design	R0 - R500/month	R1,000 - R20,000	R20,000 - R500,000+
eCommerce setup	R350 - R500	R2,000 - R20,000	R20,000+
Maintenance & Updates	R0 (DIY)	R300 - R1,500/month	R500 - R3,000/month
SSL (if not free)	R200 - R1,000/year	Same	Same

PROPOSAL 2:

Organizational Overview:

- The name of the organization I have chosen is Juicy Vibes. Juicy Vibes is a local modern and lifestyle clothing brand that creates stylish, high-quality apparel clothes and accessories for people who love fashion and creativity, and those who have confidence and love expressing themselves. This brand was created by a young, passionate, and intelligent person, and it is designed specifically for the youth.

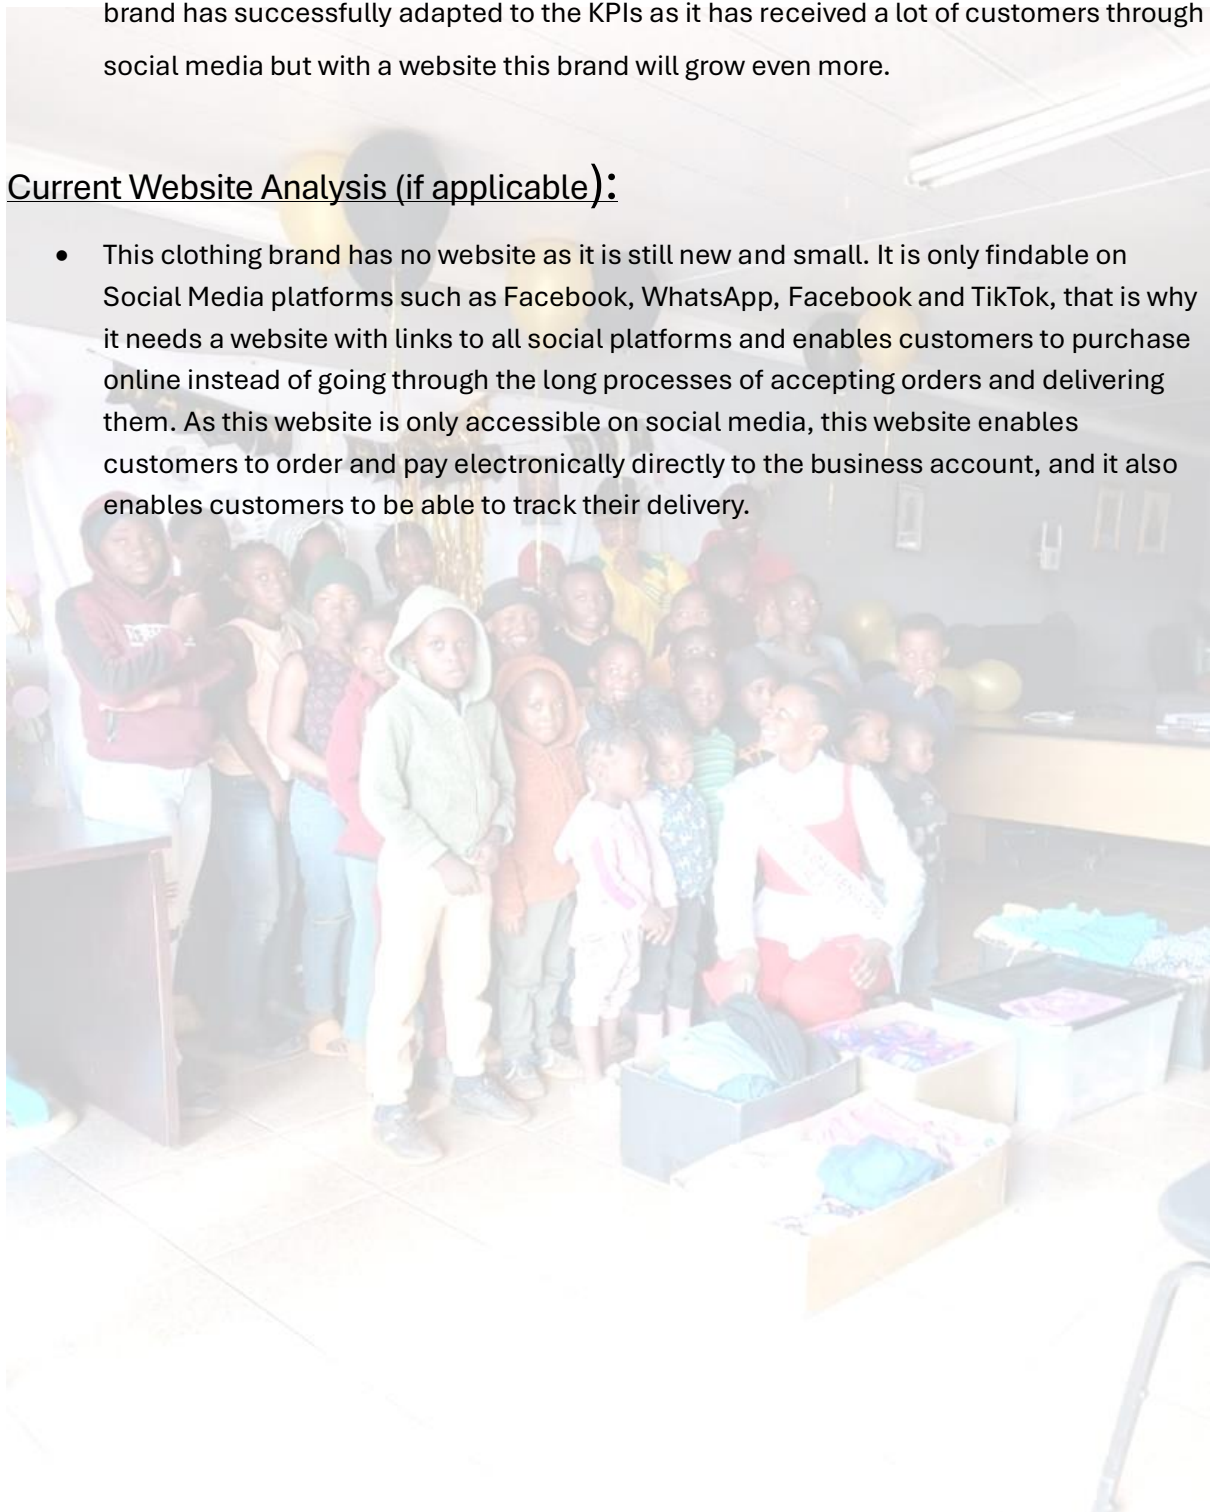

Website Goals and Objectives:

- My website is for Credibility, so that the clothing brand can gain potential customers who only like an organization that has smart and appropriate website as they chase quality and a website that is well designed shows professionalism.
- Another goal of the website is to let those who were not aware of our brand be aware so that they can come to visit our store and purchase our clothes. This website also provides details that customers need for them to purchase our brand both electronically and physically (e.g. Banking details, Location, Contact details, Social Media Platforms information)

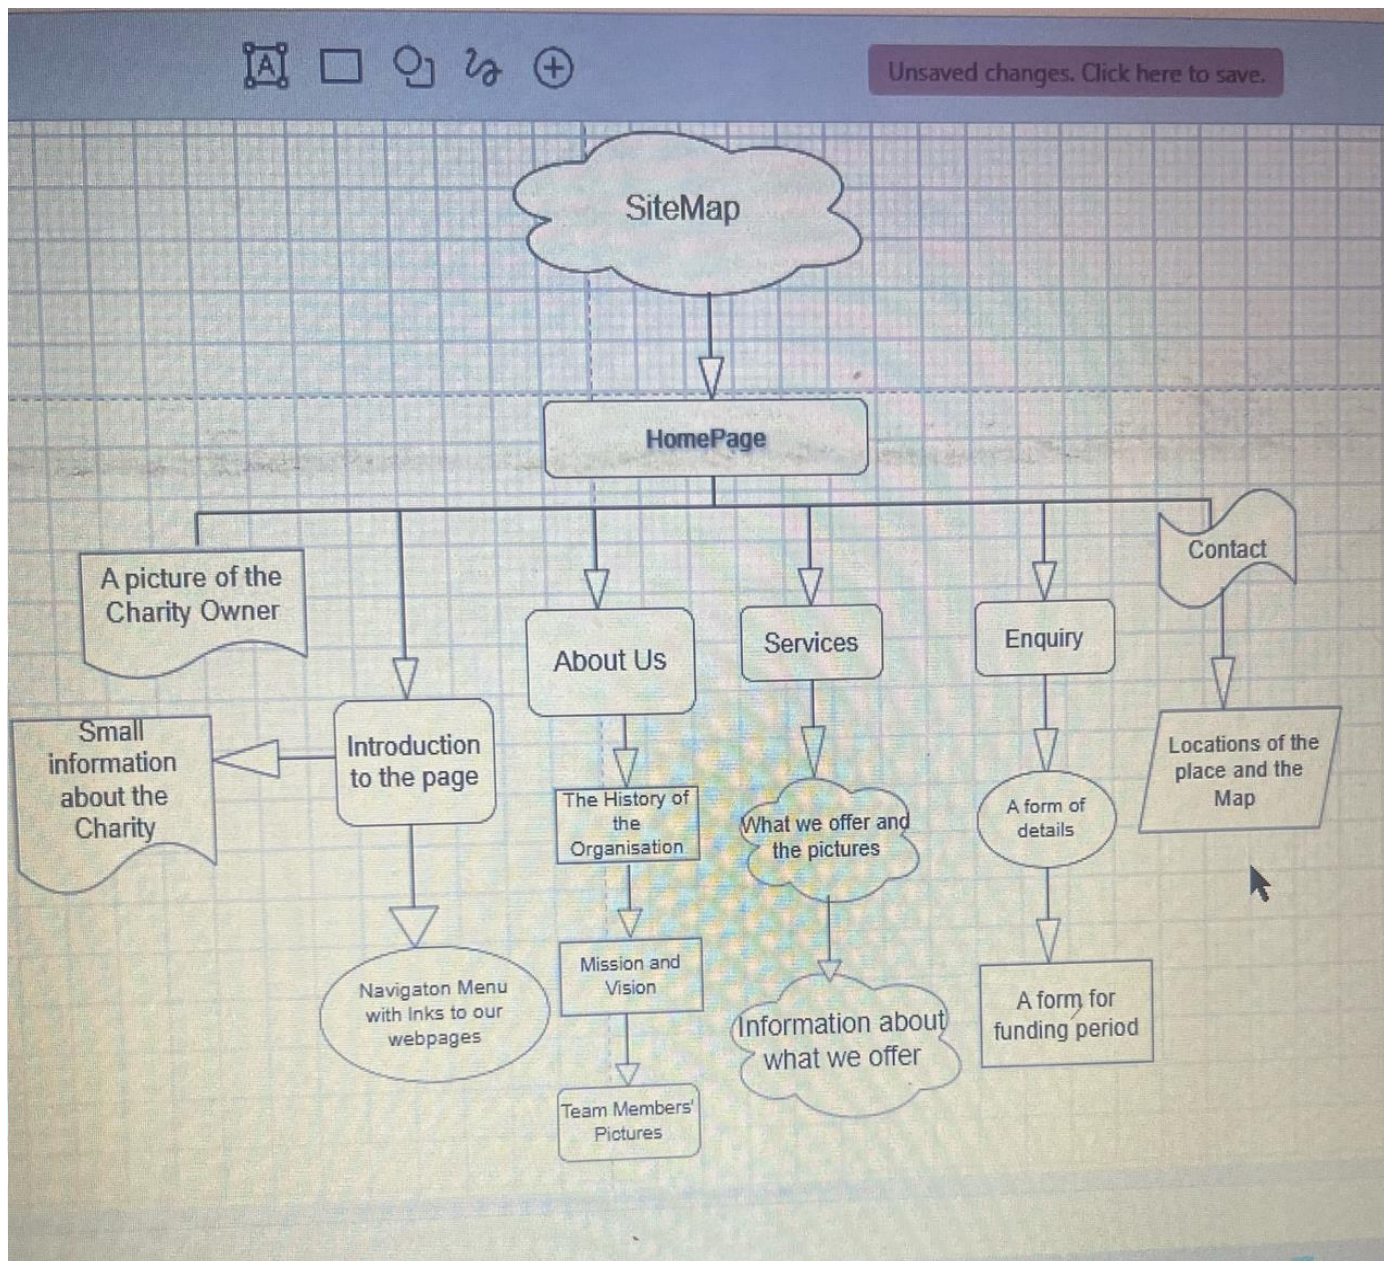

- My website also provides a lead for customers to identify our brand through search engines; my website is well-structured and Search Engine Optimized. This is also an advantage for the business to not spend extra cost on creating a website. This clothing brand has successfully adapted to the KPIs as it has received a lot of customers through social media but with a website this brand will grow even more.

Current Website Analysis (if applicable):

- This clothing brand has no website as it is still new and small. It is only findable on Social Media platforms such as Facebook, WhatsApp, Facebook and TikTok, that is why it needs a website with links to all social platforms and enables customers to purchase online instead of going through the long processes of accepting orders and delivering them. As this website is only accessible on social media, this website enables customers to order and pay electronically directly to the business account, and it also enables customers to be able to track their delivery.

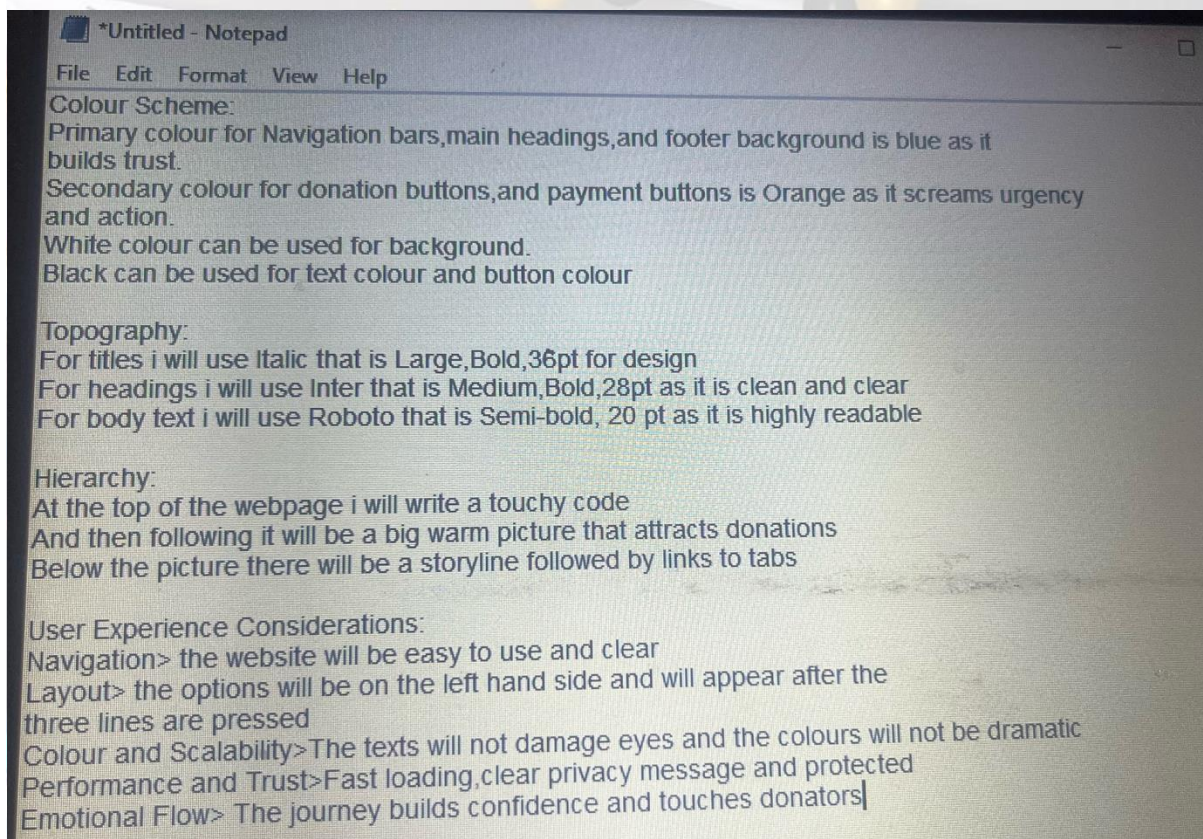

Proposed Website Features and Functionality:

Design and User Experience:

This website is designed in a way that users are and are not technically stable,

Technical Requirements:

- The name of your website must have a genuine name and there must be money for constant renewal of ownership.
- There are multiple programming languages that can be used for creating a website but I'm going to use HTML, CCS and Java Script

1. Domain Name Requirements

A domain name is your website's digital address. To acquire and configure one, you must fulfill these standard criteria:

- **Uniqueness:** The name must not be registered by anyone else. You can check availability via a domain registrar like GoDaddy or Namecheap.
- **Registration Cost:** Domains require annual renewal fees to maintain ownership.
- **DNS Configuration:** You must point your domain's Domain Name System (DNS) settings (specifically A records or Nameservers) to your web hosting provider's IP address.
- **SSL Certificate:** To establish a secure `https://` connection, an SSL certificate must be mapped to your domain name.

2. Hosting Requirements by Tech Stack

Web hosting provides the server space, computational power, and databases needed to serve your website files. Hosting options are categorized by how much control and environment customization they offer:

Shared Hosting

- **Best for:** PHP, static HTML/CSS/JavaScript websites.
- **Requirements:** Pre-configured environments with standard control panels (like cPanel).
- **Limitations:** Very limited support for customized backend runtimes like Node.js or Python.

Virtual Private Server (VPS) & Cloud Hosting

- **Best for:** Python (Django/Flask), JavaScript (Node.js), Ruby (Rails), Java, Go.
- **Requirements:** Complete **root access (SSH)** to install custom runtime dependencies, manage specific environment variables, and configure web proxies.
